

**STATEMENT ON RESPIRATORY MONITORING DURING
ENDOSCOPIC PROCEDURES**

Committee of Origin: Ambulatory Surgical Care

(Approved by the ASA House of Delegates on October 21, 2009)

Monitoring for exhaled carbon dioxide should be considered during endoscopic procedures in which sedation is provided with propofol alone or in combination with opioids and/or benzodiazepines, and especially during these procedures on the upper gastrointestinal tract. Careful attention to airway management must be provided during endoscopic retrograde cholangiopancreatography (ERCP) procedures performed in the prone position where ventilatory monitoring, airway maintenance, and resuscitation may be especially difficult.
